

TAKE A SHINE TO SAFETY WITH SLIP-RESISTANT FLOOR REFINISHING.

Beautiful hard-surface floors can be one of the most impressive features of your facility. And yet, if a customer, tenant or employee injures themselves on a dirty and/or wet floor, this can have major impact on your business reputation and liability exposure.

ServiceMaster Clean®, in partnership with Slip and Fall Solutions and ACAST, now offers slip-resistant floor refinishing. Ideal for many types of flooring surfaces, this refinishing process improves slip resistance, does not acid-etch (an invasive process which generally increases the floor’s pore size, allowing dirt, grease and oil to soil the floor more quickly) and does not compromise the surface appearance or color.

Many businesses across the country depend on ServiceMaster Clean to look their best. Whether you have one location or hundreds, we develop a customized plan to keep your facilities looking great. We have proven systems to specifically meet your communication, billing and service delivery needs in our effort to exceed service expectations. Together with our partners, ServiceMaster Clean has a solution to help prevent the occurrence of slip and fall accidents and to provide clean, safe floor surfaces.

FLOORING SURFACES SUITABLE FOR NO-SLIP TREATMENT 5100
